

ANNOUNCEMENT

With reference to the information given in PNL 1980, Vol. 12, about the Polish Pea Gene Bank, we would like to inform PGA members that the Catalogue of Pisum Lines has been published. The registry of 1406 accessions consists of two parts. The lines listed in Part I follow Lehmann's key whereas the lines in the second part are arranged according to Blixt's mutation groups. The complete set of type-lines for Pisum alleles is also included. The catalogue provides the basic passport information (catalogue number, the name of line, the donor, the origin) and classification, alphabetical index, the register of descriptors, and the common inventory of lines in two Gene Banks, Weibullsholm and Wiatrowo. This catalogue may be ordered from the address given below:

W. K. Swiecicki
Plant Experiment Station, Wiatrowo
62-100 Wagrowiec
