

Symbol *Pmv* for plantago mottle virus resistance changed to *Plmv*

The letters *pmv* were inadvertently used for two different genes. Provvidenti (1979; J. Hered. 70:350-351) used the symbol *Pmv* for a dominant gene in pea conferring resistance to plantago mottle virus while Provvidenti (1990; J. Hered. 81:143-145) used *pmv* for a recessive gene conferring resistance to pea mosaic virus. We have agreed to resolve this situation by resymbolising the gene for plantago mottle virus resistance as *Plmv* and retaining the symbol *pmv* for resistance to pea mosaic virus. These symbols are also more descriptive for the virus to which they confer resistance.
